**Oncologie
Médicale**

Chimiothérapies

Hormonothérapies

**Traitements
biologiques**

SURVIE DES PATIENTS RECIDIVANTS OU METASTATIQUES ORL

X Pivot et al, Oncology, 2002

Patientes présentant un cancer du sein métastatique: survie à 10 ans

Greenberg P., J. Clin. Oncol, 14, 1996: 2197-2205

STADE METASTATIQUE

- Guérison
- Période curative
- Période incurable

CHIMIOThERAPIE ADJUVANTE

Objectif : traiter les micro-métastases et augmenter la survie

Chirurgie

SURVIE SANS RECIDIVE - Population RH+

Courbes tronquées à 42 mois

BCIRG 001: tac versus ac

Survie sans Récidive

Suivi Median : 33 mois

DISEASE-FREE SURVIVAL

Traiter le mieux possible mais le moins de malade possible ?

Etudes de chimiothérapie « radiosensibilisatrice »

Utilise des doses minimales de chimiothérapie

Radio-chimiothérapie concomitante

Objectifs :
Augmenter l'efficacité (synergie RT + CT)
Augmenter la survie

CHIMIOThERAPIE D 'INDUCTION

Objectifs : **Traiter les micro-métastases**
Favoriser le traitement local
Améliorer la survie

Chirurgie

Cancer localement avancé

Chimiothérapie d'induction Préservation laryngée

332 patients

Chimiothérapie néoadjuvante

N = 1523

-TRT néoadjuvant -

CONCLUSION

- Métastatique
- Adjuvant
- Néoadjuvant
- Induction
- Radiochimio concomitante
