- The DRCI coordinates the research center that defines the establishment's strategic policy.
- It contributes to developing a site policy in association with regional partners.
- It encourages the scientific network of professionals at the CHU and interregional partners.
- It steers, coordinates and manages research & innovation projects.
- It works to ensure the smooth progression and quality of the projects put forward by researchers with a constant concern for improving performances.

Strategic steering

- Coordination and promotion of the research center.
- Definition of priority research areas.
- Provision of operational support structures.
- Follow-up and assessment.

Project management

- Internal promotion: this activity concerns the implementation, oversight and closure of some 180 clinical research projects promoted by the CHU.

- Support for projects put forward by researchers.
- Technical and regulatory management in accordance with the applicable legislative texts.
- Quality control.

- External promotion: Administrative and financial management has to be provided for more than 790 research projects carried out at the CHU and promoted by external partners, whether industrial, institutional or academic.

- Administrative management of agreements.
- Identification of excess costs related to the implementation of protocols and invoicing.
- Monitoring inclusions.

Translational research, innovation and promotion

The results of the research should give rise to transfer to the socioeconomic world to the benefit of patients in the long run.

- Promotion and management of diagnostic and therapeutic innovations.
- Declarations of inventions and patents.
- Support for creating start-ups.

Transdisciplinary missions

- Administration of computerised databases on trials (SIGREC) and scientific publications (SIGAPS).
- Managing calls for projects.
- Declaration of biological sample collections.

Communication

- Circulation of information to researchers
- R.com Recherche newsletter
- Popularisation and media coverage of the scientific breakthroughs made by the researchers at the CHU
- https://www.chu-besancon.fr / research section

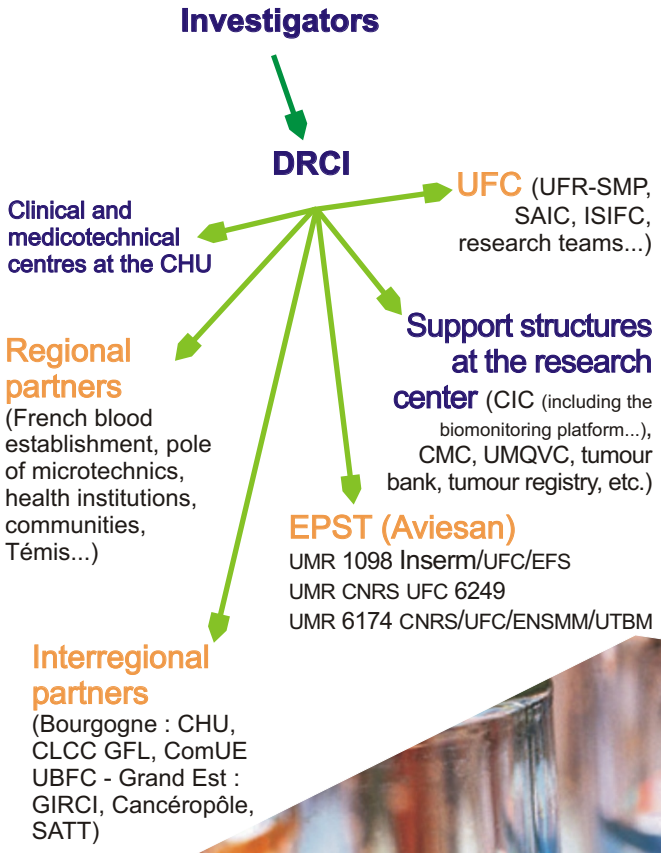

Encourage the emergence and recognition of high-quality, innovative research to contribute to medical progress and optimum quality of care.

Figures, 2015

Scientific network and site policy

The diversity and complementarity of the teams at the CHU and their external partners contribute to the excellence of their research work. The DRCI is an interface between the various stakeholders and facilitates synergy between them.
